## 2026 China-ASEAN

Young Scientists Dialogue on  
Artificial Intelligence  
and Biodiversity

## CONFERENCE GUIDEBOOK

### Hosts

World Association of Young Scientists  
Guangxi Association for Science and Technology  
Guangxi Academy of Sciences

Nanning, China | September 18-21, 2026

**WAYS**

世界青年科学家联合会  
World Association  
of Young Scientists

### ● Hosts

World Association of Young Scientists

Guangxi Association for Science and Technology

Guangxi Academy of Sciences

### ● Organizer

Guangxi Science and Technology Museum

### ● Co-organizers

China-ASEAN Artificial Intelligence Industry Innovation Center

Guangxi Youth Science and Technology Education Association

Guangxi Association for Society Studies

## Things You Should Know

### ● Registration

Participants will check in and register in the first-floor lobby of the No. 38 Minsheng Road, Xingning District, Nanning City Nanning Hotel, China, and collect conference materials.

### ● Accommodation

Please check in at the reception desk.

The check-out time is no later than 14:00. Please be noted that after 14:00 will be charged for another half-a-day' s hotel fee and after 18:00 will be charged for one whole day' s hotel fee.

If you need an accommodation invoice, please get it at the reception desk and carefully check the invoicing information before you leave the hotel.

### ● Meals

Please have breakfast with your hotel meal vouchers and use meal vouchers for buffet and banquet. Meal vouchers are valid on the day of issue and for the specific meal.

### ● Contact

|    | Wen Xiangying                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | South China Botanical Garden, Chinese Academy of Sciences; BGCI China Office                         | Executive Director of BGCI China Office                     |
|                                                                                       | Xiangying Wen, Professor of South China Botanical Garden (SCBG) / South China National Botanical Garden, the Executive Director of BGCI China Programme Office. Since 2008, she has been working with Chinese botanical gardens/arboreta, forest sectors and plant conservation organizations on the implementation of China's Strategy for Plant Conservation (CSPC) which aims to halt the continuous loss of Chinese plants, integrating ex situ, in situ conservation and reintroduction, as well as the restoration of degraded ecosystem. She also devotes herself to promote and enhance the communication and cooperation between Chinese botanical gardens and global botanical gardens. She is the author of more than 30 academic papers in botany and plant diversity conservation, as well as involved in the compilation of several books including the chief editor of the book Integrated Conservation of Rare and Threatened Woody Plants: Practice of and Perspectives from BGCI Programs in China (2010-2020). She led the translation of professional books such as the From Idea to Realisation: BGCI's Manual on Planning, Developing and Managing Botanic Gardens. |                                                                                                      |                                                             |
|    | Hu Lianglin                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Computer Network Information Center, Chinese Academy of Sciences (CNIC, CAS)                         | Professor-level Senior Engineer                             |
|                                                                                       | Deputy Director of the Department of Big Data Technology and Application Development and Director of the National Basic Science Data Center. He serves as an Executive Committee Member of the Committee on Data (CODATA) of the International Science Council, Secretary-General of the CODATA China National Committee, a Chinese expert for ISO/TC 46/SC 4 and ISO/TC 184/SC 4/WG 13, and a member of the National Technical Committee for Standardization of Science and Technology Infrastructure (TC486). He has long been engaged in research and practice in scientific big data governance, data standards, data quality, data security and ethics, and the evolution of data as a factor of production.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                      |                                                             |

|                                                                                       | Ravenna Chen is Chief Executive Officer of Intrinsic SEA and Secretary-General of the Southeast Asia Advanced Manufacturing & Technology Council (SEAMAT Council), and a Forbes China and 36Kr Top 100 honoree. She has worked for over a decade in Asia-Pacific technology cooperation and cross-border industrial landing, previously serving as Malaysia General Manager and Asia-Pacific Cooperation Director at TusStar (Tsinghua Science Park). She has initiated five China – ASEAN international technology cooperation programmes, supported the landing of more than 200 companies in ASEAN, and oversees approximately USD 150 million under advisory. She currently contributes to the Southeast Asia expert input for ClimateTech In Focus 2026, the climate technology report jointly issued with the United Nations, APEC and Shanghai Climate Week, chairs the ASEAN Technology Cooperation & Development Summit (ATCDS 2026), and serves as Visiting Professor at Tunku Abdul Rahman University of Management and Technology, Malaysia. She is co-author of The ASEAN Economy.                                                                                           |                                                                                                      |                                                             |
|  | Liu Kainan                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Executive President / Professor, Xiangsihu College of Guangxi Minzu University                       | Nanning Institute of Digital Technology (under preparation) |
|                                                                                       | His main research areas include human-computer interaction, artificial intelligence, natural language processing and visual semantic computing, big data and intelligent decision-making.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                      |                                                             |
|  | Chen Jianping                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Shanghai Chenshan Botanical Garden                                                                   | Chief Engineer for Digital Development                      |
|                                                                                       | Chen Jianping is a Senior Engineer and the Chief Engineer for Information Systems at Shanghai Chenshan Botanical Garden. His primary research focus lies in biodiversity informatics, with extensive experience in designing and implementing large-scale data sharing platforms. He has been instrumental in the creation of several nationally significant infrastructures, notably the National Specimen Information Infrastructure (NSII), the Chinese Field Herbarium (CFH), and the BioONE platform for biodiversity and ecological security big data. In his current capacity, he oversees the development of both institutional research information systems and specialized thematic information platforms within the IT Department, contributing to advancing data-driven approaches in plant science and conservation.                                                                                                                                                                                                                                                                                                                                                         |                                                                                                      |                                                             |
|  | Xu Zheping                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | National Science Library, Chinese Academy of Sciences                                                | Research Librarian                                          |
|                                                                                       | Xu Zheping is a research librarian of National Science Library, Chinese Academy of Sciences. His main research fields include scientific data, scientific and technological information analysis, and open science. In recent years, he has presided over and participated in the base and talent projects of the Ministry of Science and Technology, the pilot sub project of the Chinese Academy of Sciences, and the Library and intelligence project of the Chinese Academy of Sciences. He has served as the editorial board member of several academic journals such as Data Intelligence, Journal of Agricultural Big Data, and Chinese Science and Technology Terminology, and has served as an expert group or working group member in international organizations such as CODATA (International Commission on Science and Technology Data), GBIF (Global Biodiversity Information Agency), and IPBES (Intergovernmental Science Policy Platform for Biodiversity and Ecosystem Services). Published over 40 articles/books.                                                                                                                                                     |                                                                                                      |                                                             |
|  | Yim Wen Han Marx                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Tropical Ecology & Entomology Lab, Asian School of the Environment, Nanyang Technological University | Project Officer                                             |
|                                                                                       | Marx Yim is a Project Officer at the Tropical Ecology & Entomology Laboratory, Asian School of the Environment, Nanyang Technological University, Singapore. His work focuses on tropical biodiversity, entomology, biodiversity data mobilisation, and science communication, with a particular interest in Southeast Asian insects and their ecological importance. He has been involved in field research and specimen-based studies across Singapore and Malaysia, particularly Sabah, Borneo, as well as biodiversity digitisation and open-data initiatives through the Global Biodiversity Information Facility (GBIF). His work includes coordinating expeditions, managing research projects and grants, supporting specimen imaging and databasing, and developing approaches to make biodiversity research more accessible to wider audiences. He is particularly interested in bridging field-based natural history with modern digital approaches to biodiversity research, while promoting open access to ecological and taxonomic information.                                                                                                                             |                                                                                                      |                                                             |

|                                                                                     | Haifang Jian, Ph.D., is a Professor and Doctoral Supervisor. He received his B.E. degree from the Department of Electronic Systems Engineering at Shandong University in 2000, his M.E. degree in Microelectronics and Solid-State Electronics from the Department of Electronic Engineering at Beijing Institute of Technology in 2005, and his Ph.D. degree in Microelectronics and Solid-State Electronics from the Institute of Semiconductors, Chinese Academy of Sciences, in 2010. His current research focuses on hardware – software co-design technologies for artificial intelligence applications, including deep-neural-network-based multimodal audio-visual processing, heterogeneous intelligent computing architectures, and hardware – software co-optimization. He has undertaken a number of national and ministerial/provincial research projects, including a research project under the Science and Technology Innovation 2030—“New Generation Artificial Intelligence” Major Project, the Chinese Academy of Sciences Special Program for Cybersecurity and Informatization, and projects funded by the National Natural Science Foundation of China. |                                                                                           |                           |
|    | Liu Bo                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Minzu University of China                                                                 | Lecturer                  |
|                                                                                     | Bo Liu, Lecturer at the College of Life and Environmental Sciences, Minzu University of China, Ph.D. from the Institute of Botany, Chinese Academy of Sciences. He has long focused on the inventory, data integration and comprehensive assessment of Southeast Asian plant diversity. As a core member of the Mapping Asia Plants (MAP) digital plant project, he is responsible for plant species data curation, checklist compilation and database construction for Southeast Asia, providing fundamental dataset support for big - data - driven analysis of regional plant diversity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                           |                           |
|    | Long Yuntao                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Institutes of Science and Development, Chinese Academy of Sciences                        | Associate Research Fellow |
|                                                                                     | Yuntao Long is an Associate Professor at the Institutes of Science and Development, Chinese Academy of Sciences (CASISD). She holds a Ph.D. in Economics and completed her postdoctoral research in Systems Science. She is a Senior Member of the China Computer Federation (CCF), and serves as a member of the inaugural CCF Technical Committee on Open Source Development, as well as the Head of its Open Source Strategy Working Group. Her research and policy consulting work have long focused on open source innovation strategy, data governance, and the development of the artificial intelligence industry. She has led more than 20 research projects, including those funded by the National Social Science Fund of China, the Emergency Consulting Projects of the Academic Divisions of the Chinese Academy of Sciences, and the National Data Administration. Her policy advisory reports have been repeatedly endorsed by national leaders. In 2023, she was selected for the “Young Talent Program of Science and Technology Think Tanks” of the China Association for Science and Technology (CAST).                                                   |                                                                                           |                           |
|  | Tan Chun Hong                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Faculty of Science and Marine Environment, Universiti Malaysia Terengganu                 | Associate Professor       |
|                                                                                     | Dr. Tan Chun Hong is a marine biology researcher at Universiti Malaysia Terengganu whose work focuses on coral reef ecology, biodiversity, reproduction, and conservation. His research examines coral community structure, benthic ecology, coral health and reproductive capacity, and responses to environmental stress. He combines field ecological surveys, experimental approaches, and quantitative data analysis, and collaborates with research institutions in Malaysia and Southeast Asia on coral reef monitoring and capacity building. He also explores image-analysis and digital platforms such as ReefCloud to improve the efficiency and consistency of reef assessment and to support evidence-based conservation and long-term coral reef management.                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                           |                           |

|                                                                                     | Chu Thinzar Nyan is a staff officer with Myanmar's Forest Department under the Ministry of Natural Resources and Environmental Conservation, with more than ten years of experience in forestry and natural-resource management. She received a bachelor's degree in Forestry in 2011 and a master's degree in Science in 2017 from the University of Forestry and Environmental Science, Myanmar, and joined the Forest Department in 2013. Her work covers forest management, protected-area development, project management, monitoring and evaluation, mangrove and coastal conservation, watershed management, and ecosystem conservation. She is currently pursuing a Ph.D. at Beijing Forestry University, researching ecological security patterns and climate-resilient restoration priority areas in Myanmar's Central Dry Zone, with work involving remote sensing, GIS, landscape ecology, and ecosystem services.                                                                                                                                                                                                                                                |                                                                                           |                           |
|  | Zhuang Haifu                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Kunming Institute of Botany, Chinese Academy of Sciences                                  | Senior Engineer           |
|                                                                                     | Zhuang Haifu, Senior Engineer, Director of the Science and Technology Information Center, Kunming Institute of Botany, Chinese Academy of Sciences. He is a CAS Key Technical Talent and Yunnan Provincial Top Young Talent. His main research focuses on biodiversity informatics and platform development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                           |                           |
|  | Lu Suxiang                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Institute of Hydrobiology, Chinese Academy of Sciences                                    | Engineer                  |
|                                                                                     | Suxiang Lu, Ph.D., Engineer at the Institute of Hydrobiology, Chinese Academy of Sciences. He focuses on aquatic biodiversity and environmental DNA (eDNA) monitoring methodology. He developed a fish genome foundation model and proposed an integrated “lightweight sampler and self-drying filter” solution. The “three-mode multi-channel eDNA collector” he developed won the Third Prize for Self-developed Equipment in Hubei Province. Related patents and products have been widely applied, significantly improving the efficiency and reliability of aquatic biodiversity monitoring. He has led one subproject of a major research program and participated in multiple projects, including the National Key R&D Program of China and the National Natural Science Foundation of China. He has published more than ten papers in journals such as Science China Life Sciences, Nature Ecology & Evolution, and Water Biology and Security, and has filed over twenty invention patents.                                                                                                                                                                          |                                                                                           |                           |

|                                                                                       | Ms. Sun Dongjing, the Deputy Director of the Ecological Industry Institute of Guangxi Academy of Sciences, senior engineer of the Ecological Protection and Restoration Innovation Team. She served as the Secretary-General in Guangxi Society of Ecology. She has been a visiting scholar at the University of British Columbia (UBC) in Canada. Her research interests including forest ecosystem services, efficient cultivation and sustainable forest management, vegetation restoration in karst mountainous areas, understory plant diversity, and soil nutrient cycling. She has implemented or participated in more than 20 scientific research projects and published over 30 academic papers in scientific journals; she has also developed two local and two industry group standards, and co-authored four monographs.                                                                                                                                                                                                                                                                          |                                                                                                                                                |                                          |

|                                                                                       | Dr. Rungtiwa Phookamsak is a fungal taxonomist specializing in fungal taxonomy, nomenclature, and molecular phylogeny. She was a postdoctoral researcher at the Kunming Institute of Botany, Chinese Academy of Sciences, and has served as a Research Associate Fellow since 2023, focusing on microfungi associated with economically and medicinally important plants in China and Thailand. Her research interests encompass fungal diversity, plant-associated fungi, fungal – plant interactions, and bioactive secondary metabolites. She has established extensive international collaborations with leading institutions in China and Thailand. She has published 162 research articles (H-index 46; 15,034 citations) and serves as Editor-in-Chief of Studies in Fungi (Scopus Q2), as well as a curator, reviewer, and external Ph.D. examiner. Since 2015, she has mentored and co-supervised more than 15 Master's and Ph.D. students. Her distinctions include being a Clarivate Highly Cited Researcher (2018 – 2022) and being listed among the world's top 2% scientists from 2021 to 2025. |                                                                                                                                                |                                          |

|                                                                                       | Vicente Oliveira Soares is a Timorese professional with a bachelor's degree in Industrial Engineering from the University of Merdeka Malang, Indonesia. He has more than ten years of experience in biodiversity, environmental projects, agriculture, irrigation development, project coordination, administration, monitoring and evaluation, and community engagement. Since 2023, he has served as a technical professional with the National Biodiversity Directorate of Timor-Leste's Ministry of Tourism and Environment, contributing to biodiversity projects, development-partner coordination, access and benefit-sharing (ABS), and management of the national biodiversity web portal. He previously supported JICA experts on agriculture and irrigation projects.                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                |                                          |
|  | Normakristagalah Pesigrihastamadya                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Research Center for Biosystematics and Evolution, National Research and Innovation Agency (BRIN)                                               | Researcher                               |
|                                                                                       | Pesigrihastamadya Normakristagalah (Pesi) received his Ph.D. in Data Management and Biometrics in 2024 from the Faculty of Electrical Engineering, Mathematics and Computer Science at the University of Twente, the Netherlands. He currently works at the Research Center for Artificial Intelligence and Cybersecurity of Indonesia's National Research and Innovation Agency (BRIN). His research mainly focuses on artificial intelligence for computer vision and image processing, particularly biometric and biomedical applications. He has also contributed to biodiversity information technology research, including Darwin Core-based taxonomic metadata, development of the Indonesian Biodiversity Information Facility (InaBIF), DNA-based phylogenetic analysis of fish, and plant identification using image processing and leaf morphology.                                                                                                                                                                                                                                                |                                                                                                                                                |                                          |
|  | Lê Thu Thuỷ                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Centre for Biodiversity Monitoring and Investigation, The Nature and Biodiversity Conservation Agency, Ministry of Agriculture and Environment | Staff                                    |
|                                                                                       | Lê Thu Thuỷ holds a master's degree in Remote Sensing, Cartography and Geographic Information Systems from Vietnam National University, Hanoi, and currently works at the Nature and Biodiversity Conservation Agency under Vietnam's Ministry of Agriculture and Environment. She has more than eight years of research experience and previously worked as a researcher at the Space Technology Institute of the Vietnam Academy of Science and Technology. Her work has included applying artificial intelligence and multi-source satellite imagery to forest-change monitoring, land-cover classification, and environmental-resource assessment, with related research publications. In recent years, she has served as a core researcher on projects using artificial intelligence to identify endangered, precious, and rare bird and plant species prioritized for protection in Vietnam.                                                                                                                                                                                                            |                                                                                                                                                |                                          |
|  | Lu Hongxue                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Global Student Development Working Committee, World Association of Young Scientists                                                            | Deputy Chair                             |
|                                                                                       | Primarily engaged in research on explainable machine learning and environmental data analysis, with a focus on PM2.5 forecasting, energy forecasting, and life cycle assessment. Developed a leakage-aware machine learning research framework and proposed methods for physics-consistent and unseen-mixture validation, with related findings published in several international journals. Has led or participated in multiple research projects and published seven academic papers, with research interests spanning the interdisciplinary fields of environmental monitoring, artificial intelligence, and sustainable development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                |                                          |

## Hotel Information

- Hotel Name: Nanning Hotel
- Address: No. 38 Minsheng Road, Xingning District, Nanning
- Telephone: Main Line: +86-771-2103888; Front Desk: +86-771-2103981
- Check-in / Check-out: Check-in after 12:00 noon; check-out before 14:00.
- Breakfast: Included in the room rate (Buffet Restaurant, 8th Floor, Jinxiu Building).
- Additional Services (Extra Charge): Laundry and document printing.

## WiFi

- Conference Venue: Free WiFi is available at the conference venue.
- WiFi Name: GXNNFD
- Password: 07712103888
- Guest Rooms: Turn on the TV and wait approximately 2 minutes. Connect to the WiFi network named "ChinaNet + Room Number." No password is required

## Dining Arrangements

- During the conference, breakfast will be provided every morning at the buffet restaurant on the 8th floor of Jinxiu Building.
- Lunch and dinner will also be provided at the buffet restaurant on the 8th floor of Jinxiu Building during the conference.
- A banquet will be held on the evening of September 19 in Hall No. 3 on the 9th floor of Jinxiu Building.

## ➤ Introduction to the China-ASEAN Artificial Intelligence Application Cooperation Center

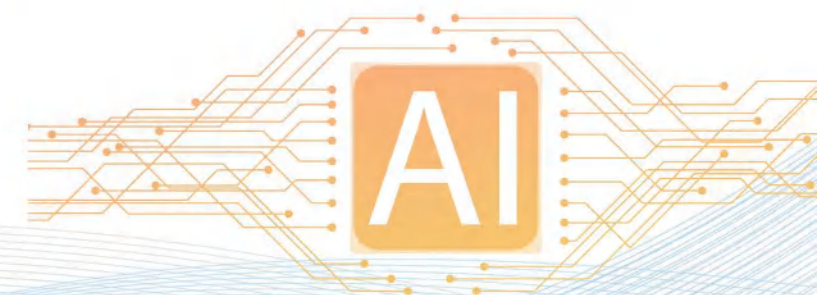

To implement the important initiative proposed by President Xi Jinping at the “Shanghai Cooperation Organization Plus” Meeting on September 1, 2025 — that China is willing to work with all parties to jointly develop artificial intelligence application cooperation centers and share the benefits of AI development — China and ASEAN countries jointly launched the development of the China-ASEAN Artificial Intelligence Application Cooperation Center at the China-ASEAN Ministerial Roundtable on Artificial Intelligence on September 18, 2025. Based in Guangxi, an important region for China’s opening-up and cooperation with ASEAN, the Center represents a significant outcome of practical China-ASEAN cooperation in artificial intelligence. It also serves as a cooperation platform through which both sides jointly promote the use of AI to empower economic and social development, with a commitment to better meeting ASEAN countries’ needs for digital and intelligent transformation.

In response to the practical needs of China-ASEAN cooperation in artificial intelligence, the Center has systematically established an overall operational framework built around “four core functions” and supported by “three supporting systems.” The four core functions are: strengthening the foundations for AI development by providing China and ASEAN countries with accessible computing power and other basic support capabilities, thereby lowering the threshold for AI adoption; providing open-source and open-access services by promoting the joint development of AI open-source communities and data spaces, jointly developing AI models for local languages with ASEAN countries, and creating demonstration application scenarios in key fields such as manufacturing, agriculture, healthcare, and education; strengthening industrial cooperation and business matching by serving as both a gateway for Chinese enterprises entering ASEAN markets and an entry point for ASEAN enterprises engaging with China, while providing Chinese-invested and ASEAN local enterprises with integrated services including policy coordination, financing support, and market

matchmaking to facilitate the cross-border deployment of AI achievements; and promoting talent development through joint professional training, technical programs, and scientific research exchanges, continuously enhancing regional capabilities in AI application and innovation.

To support these functions, the Center has simultaneously established “three supporting systems” for long-term operation. First is a spatial support system that is “based in Nanning and serves ASEAN.” Its core physical facility is located in Wuxiang New District, Nanning, Guangxi, with a floor area of approximately 19,000 square meters integrating service, exhibition, and practical training functions. Second is a network of sub-centers covering ASEAN countries. Overseas sub-centers have already been jointly established with Vietnam and Laos, serving as important nodes for localized cooperation and project implementation. Third is a cross-regional functional platform system that connects platforms such as the China-ASEAN Artificial Intelligence Computing Power Alliance and the Open-Source Alliance to build a collaborative network spanning different stakeholders and regions.

Through the coordinated operation of the “four core functions” and “three supporting systems,” the Center uses Guangxi as a key integration hub to accelerate implementation of the collaborative model of “R&D in Beijing, Shanghai and Guangdong; integration in Guangxi; application in ASEAN.” It promotes the coordinated application of AI technologies and the sharing of achievements between China and ASEAN countries, helping bilateral cooperation evolve from project-level engagement toward a more systematic and sustainable cooperation ecosystem.

## About Guangxi Botanical Garden of Medicinal Plants

Guangxi Botanical Garden of Medicinal Plants (Institute of Medicinal Plant Development of Guangxi Zhuang Autonomous Region, Guangxi Branch of the Institute of Medicinal Plant Development of CMCAMS), was established in 1959 and now covers an area of 202 hectares. As a non-profit public institution directly under the Guangxi Administration of Traditional Chinese Medicine, it is dedicated to the conservation of medicinal animal and plant resources, science popularization, the development of Chinese herbal medicine products, the drafting of quality standards for these products, and testing services. In 2011, it was certified by Guinness World Records as the “Largest Botanical Garden of Medicinal Plants” for having the most species of medicinal plant conserved and the largest area.

The garden currently boasts 2 national-level research platforms (National Engineering Center for the Development of Endangered Medicinal Materials Resources in Southwest China, and National TCM Inheritance and Innovation Center), 2 provincial-level key laboratories, 1 provincial-level technology innovation center, 1 provincial-level industry-academia collaborative innovation and translation center, and a third-party testing institution with dual CMA and CNAS accreditation. All these infrastructure form a comprehensive, multi-level scien

tific research and innovation system focusing on the conservation of medicinal resources, product research and development, and quality control.

Since its establishment, Guangxi Botanical Garden of Medicinal Plants has cultivated and maintained sound exchanges and cooperative partnerships with countries and regions worldwide. Building on medicinal plant resources, the garden is deeply engaged in international collaboration focused on conservation, utilization, and promoting traditional Chinese and ethnic medicine cultures. Key initiatives include establishing international joint laboratories, hosting high-level international conferences, and organizing training workshops on traditional medicine.

Additionally, field resource surveys have been conducted in Laos, contributing to the compilation of the Laos Herbal Pharmacopiea, and the garden has hosted outstanding young scientists from ASEAN member states. To date, these efforts have resulted in five international joint laboratories (e.g., China-Austria, China-USA, China-Sweden, China-Laos, and Guangxi-Macao) and the signing of over 40 cooperation agreements with 19 countries and regions, including Laos,

## ► Introduction to the World Association of Young Scientists

The World Association of Young Scientists (WAYS) was established in November 2024. Under the professional supervision of the China Association for Science and Technology (CAST), WAYS is an international, non-profit social organization voluntarily formed by international and regional young science and technology organizations, higher education institutions, and professional research institutions.

WAYS is committed to building a platform for exchange and mutual learning among young scientists worldwide, fostering consensus on “Science and Technology for Good,” and promoting sustainable development through scientific and technological innovation. It aims to contribute the wisdom and strength of young scientists to achieving the United Nations Sustainable Development Goals (SDGs) and building a community with a shared future for humanity. WAYS has obtained ISO 37301 Compliance Management System certification and conducts international scientific and technological exchanges and cooperation in accordance with laws and regulations.

WAYS currently has 119 institutional members, including 57 overseas members. Its member institutions span 31 countries and regions across five continents and include universities, research institutions, and enterprises in science, engineering, medicine, interdisciplinary studies, and other fields.

WAYS focuses on the following areas of work:

First, building high-level platforms for international exchange and cooperation. The World Young Scientist Summit, organized by WAYS, has been included in the annual key tasks of the Central Talent Work Coordination Group and selected for the Action Plan of the Ministerial Meeting of the Global Civilizations Dialogue. It is gradually developing into an important platform for young scientists to participate in global science and technology issues, exchanges and mutual learning among civilizations, and cross-sector cooperation.

Second, improving the support and incentive system for young talent. WAYS organizes talent selection programs and implements young scientist development support programs, with systematic attention to the working environment and career development pathways of early-career researchers.

Third, deepening international and regional scientific and technological cooperation. WAYS promotes dialogues among young scientists between China and the United States, China and Europe, China and Central Asia, China and ASEAN, the Lancang-Mekong region, and China and Arab countries, focusing on collaborative research and policy exchanges in areas including climate change, artificial intelligence, public health, and marine science.

Fourth, supporting local innovation and development. WAYS promotes international exchange among young talent, the sharing of scientific and technological resources, and the commercialization and application of research outcomes, contributing to regional industrial upgrading and high-quality development.

Looking ahead, WAYS will continue to leverage its international, youth-oriented, and professional strengths, striving to become a pivotal international science and technology organization connecting young scientists with the global innovation ecosystem.

## ► Profile of the Guangxi Association for Science and Technology

The Guangxi Association for Science and Technology (GAST) is the local organization of the China Association for Science and Technology (CAST) in Guangxi. It is a mass organization of science and technology professionals composed of autonomous-region-level societies, associations and research institutes, as well as associations for science and technology at the municipal and county (city and district) levels. Under the leadership of the CPC Guangxi Zhuang Autonomous Regional Committee, GAST serves as a people's organization, a provider of public science and technology services, and an important part of Guangxi's innovation system.

Founded in October 1958 and headquartered in Nanning, Guangxi, GAST currently comprises 116 autonomous-region-level societies, associations and research institutes covering the natural sciences, engineering, agriculture, medicine and interdisciplinary fields. Its organizational network also includes 47 university associations for science and technology, 14 associations in prefecture-level cities, 111 county-level associations, 714 community associations, 1,125 township and subdistrict associations, 1,682 enterprise and industrial park associations (including service stations), and 858 rural professional technical associations.

In the new era, GAST is committed to strengthening its political orientation, advancement and broad public engagement while developing itself into an open, hub-based and platform-oriented organization. It is dedicated to serving science and technology professionals, innovation-driven development, the improvement of public scientific literacy, and science-based decision-making by the Party and government. It works to promote the advancement, popularization and application of science and technology; foster the development of scientific and technological talent; and strengthen the role of science and technology think tanks.

GAST also promotes openness, mutual trust and cooperation with the international science and technology community. It conducts international non-governmental science and technology exchanges, facilitates international scientific and technological cooperation, develops friendly relations with overseas science and technology organizations and professionals, and provides services for overseas science and technology talent seeking opportunities for innovation and entrepreneurship in Guangxi.

## ➤ Introduction to the Guangxi Academy of Sciences

Founded in May 1978, the Guangxi Academy of Sciences (GXAS) is a department-level public-service institution directly under the People's Government of Guangxi Zhuang Autonomous Region. GXAS focuses primarily on basic and applied basic research, with key research areas including marine science, conservation and utilization of plant resources, biotechnology, ecological and environmental protection, next-generation information technology, health sciences, high-performance materials, and high-end equipment manufacturing. It is home to the only National Key Laboratory in Guangxi Zhuang Autonomous Region—the National Key Laboratory of Non-Food Biomass Energy Technology.

To fully leverage Guangxi's unique advantages in promoting China-ASEAN cooperation and exchanges, GXAS has actively carried out broad-based and in-depth scientific, technological and people-to-people exchanges and cooperation with ASEAN countries, achieving a series of fruitful outcomes.

### I. Scientific, Technological and People-to-People Exchange Activities

(1) Exchange Activities. From 2023 to 2025, to deepen comprehensive scientific and technological cooperation with ASEAN countries including Cambodia, Vietnam and Thailand, GXAS adopted multiple measures and established collaborative mechanisms such as Science and Technology Innovation Centers and AI Innovation Centers, creating a new pattern of cooperation across multiple fields.

(2) Development of International Cooperation Platforms. GXAS has jointly established with Cambodia, Vietnam and Thailand the Cambodia-China Science and Technology Innovation Center, the China-Cambodia Joint Laboratory for Intelligent Manufacturing Technology, the Vietnam-China Science and Technology Innovation Center, the International Education Alliance, and the China-ASEAN (Thailand) Artificial Intelligence Technology Innovation Center. It has also taken the lead in establishing platforms such as the Beibu Gulf Laboratory for Marine Resources, Environment and Sustainable Development and the China-Myanmar-Laos Joint Laboratory for Solar Energy Technology, helping advance the development of a regional scientific and technological innovation community.

(3) Joint Project Applications. GXAS has collaborated with Vietnam's Minh Duong Biochemistry on green processing technologies for modified cassava starch and their industrialization; jointly applied for a National Key R&D Program project with Rajamangala University of Technology Lanna in Thailand; and worked with Vietnamese partners to apply for a Guangxi Major Science and Technology Project to conduct surveys of large seaweed resources and demonstration studies on the application of functional components.

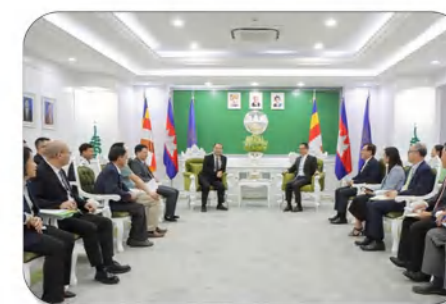

(4) International Talent Recruitment. In 2020, GXAS recruited Professor Deli from Universitas Syiah Kuala, Indonesia, to conduct research on rapid detection of diseases in marine aquaculture in the Beibu Gulf and the development of environmentally friendly fishery medicines. In 2022, Dr. Cai Caiwen from Universiti Tun Hussein Onn Malaysia was recruited to develop a genomic sequence recognition model.

### II. Measures to Promote People-to-People Exchanges with ASEAN Countries

Leveraging its strengths as a comprehensive research institution, GXAS has explored a new model of exchange driven by research cooperation, grounded in joint platform development, and connected through the joint cultivation of talent. Building on its disciplinary strengths, GXAS has established stable ties with institutions in ASEAN countries through joint project applications, academic conferences, joint scientific expeditions and other forms of cooperation. Through programs such as the "Outstanding Young Scientists" initiative, it attracts young researchers from ASEAN countries to Guangxi for academic visits and research, thereby strengthening the foundation for regional scientific, technological and people-to-people cooperation.
